About me

I operate as half researcher, half engineer. The researcher in me creates and maintains open-source projects (3000+ stars) and publications in deep learning and functional programming. The engineer in me architects production systems from scratch for ambiguous domains, building the best practices for serverless LLM platforms and multi-agent systems where none existed before.

This duality defines my technical expertise: I am half systems programmer, half AI architect. I leverage a deep foundation in programming frameworks and performance engineering to build and operationalize the next frontier of AI.

Skills

Software Design

Machine Learning Algorithms

Machine Learning infrastructure

Agentic AI

Scala ⋆5.5 Python ⋆5.5 Hack ⋆5.5
Haxe ⋆5.5 OpenCL ⋆5 DevOps ⋆5
Agile Project Management ⋆4.3
ActionScript ⋆4 C++ ⋆4 Java ⋆4

Experience

2024- Tacnode — Machine Learning Engineer
Built a serverless platform for LLM fine-tuning, test-time training, and inference, integrated with Discord and Hugging Face. Developed a multi-agent agentic system for database engineering. Owned LLMOps/MLOps, DevOps, and observability end-to-end.

2023-2024 Gradient.AI — Machine Learning Engineer
Designed and shipped serverless LLM inference and fine-tuning APIs that support test-time training loops in a multi-tenant environment.

2019-2022 Meta Platforms Inc — Software Developer
Built machine-learning infrastructure for payments fraud detection. Maintained the HHVM open-source branch and Hack standard libraries, ported HHVM to multiple Linux distributions, and built its CI pipeline.

2015-2019 Thoughtworks Inc — Lead / Senior Consultant
Delivered product line engineering consulting for Huawei and led architecture for Scala projects for RCA. Founded and maintained open-source projects including Binding.scala and DeepLearning.scala.

2006-2014 Various Game Companies — Game Developer / Tech Lead
Developed and led teams to build multiple game engines, mobile/web/social games, and 3D applications. Key contributions include engine architecture, development tools, CI/CD pipelines, and open-source libraries.

Open-source projects

2021-2022 HHVM — C++/Rust/OCaml
is Meta's virtual machine to run Hack. I ported the open source branch of HHVM to NixOS and created CI pipeline for building, testing, and packaging HHVM.

since 2018 Dsl.scala — Scala
is a framework to extend Scala language features in libraries. I also ported this framework to Haskell as Control.Dsl.

since 2016 DeepLearning.scala and Compute.scala — Scala
are libraries for creating complex neural networks.

since 2015 Binding.scala — Scala
is a reactive templating language for creating web and desktop GUI.

2015-2016 Microbuilder — Haxe / Scala / Java / JavaScript
is a toolkit to build system across micro-services implemented in various languages communicating via RESTful JSON API.

since 2012 haxe-continuation — Haxe
provides `async/await` syntax for Haxe.

since 2010 protoc-gen-as3 — ActionScript3
is a Protocol Buffers plugin for ActionScript 3.

since 2007 other 100+ of open-source projects

Publications

2025	CE-U: Cross Entropy Unlearning	first author
2017	Mondic Deep Learning	first author
2017	Ad-hoc polymorphic delimited continuations	first author
2009	Adobe Flex 3: Training from the Source	translator

Talks

2017	Deeplearning.scala - Thoughts and practices on OSS AI framework	DBTC
2017	Monadic Deep Learning	Strange Loop
2017	Neural Networks & Functional Programming	ArchData Summit · Beijing
2016	More than Async	QCon · Beijing
2015	Specific-domain extension in an universal language	ECUG Con
